

bus-styling redesigning mission of corporation. The good market reaction is shown the feasibility of expert system based on the extension theory-based RBF neural network.

CONFLICT OF INTEREST

The authors confirm that this article content has no conflict of interest.

ACKNOWLEDGEMENTS

The paper is finished under support of the project of the department of education of Guangdong Province –the high level natural foundation of Guangdong high colleges (LYM10072), Opening Specific project of key Laboratory of Innovation Method and Decision Management System of Guangdong province, China (2011A060901001-10D) and national natural scientific research starting foundation project of School of Electromechanical of Guangdong University of Technology. In addition, this work was supported too by the Innovation Methods Specific Projects of Science and Technology Ministry, China (No. 2011IM020300), the Industry-Academia-research Cooperation Foundation of Guangdong Province, China (No.2011A91000040), and the Innovation Methods Specific Projects of Guangdong Province, China (No. 2011B061100001). Thank for the support of the all above foundations.
